Abstract: The research aimed to study the effects of segregation wall on the Palestinians in Jerusalem and West Bank. Also the study tried to investigate the effect of gender of respondent, social status, place of residency, area of residency, kind of ID, distance of living from the wall and place of work. The population of the study consisted of all Palestinian in Jerusalem and West Bank. A random sample was selected 226 subjects. A questionnaire was developed for the purposes of the study. The results revealed that the wall affected the life of many people negatively. The male were more affected than female significantly. Also, there were significant differences due to area of residency.
