Abstract: *Humanistic psychologists took from the bright sides of human formation a guide for searching in man's existence, for example his entity which involves a progressive usefulness and importance of development characterized by creative capabilities, elevated experience, responsibility, spontaneity, love, virtue and other valuable meanings of man's existence, which has been brought forward towards the future. Thus, the study aims at identifying the main elements of positiveness and employing it in a questionnaire. As it was shown in the previous studies on a sample of Palestinian universities students, in Gaza Strip to find out the males, and females, differences in the costiveness. The study showed up the presence of the five elements of the Palestinian universities students. They are as follow; creativity, self-esteem, assertiveness, emotional stability and transcendence, Also the study showed up that there are no statistical differences between the males and females in the creativity and assertiveness. However, there are statistical differences between the males and females in the self-esteem which is in favour of females and emotional stability and transcendence which are in favour*
